Volcano Research Project

You and your partner will randomly draw a volcano that has had its eruptions documented to research. You will have four class days to research and put a PowerPoint presentation together (should be at least 6 slides long, not including a work cited or quiz, and include pictures of your volcano). We will begin presentations on Friday, March 27th. Your presentation needs to be emailed to me (jerica.jenkins@gilbertschools.net) by Thursday, March 26th at 10pm. NO LATE PRESENTATIONS WILL BE ACCEPTED! Your presentation should be about 3-5mins long and include a little 5-question quiz at the end of your presentation to make sure that your classmates were paying attention.

Thoroughly explain the following information for your volcano...

- Volcano Name: ________________________________
- Type of Volcano
- Dates of major eruptions
- Physical features
- Active or dormant
- Location of Volcano (name of state or country and latitude-longitude coordinates)
- Material erupted (ash, bombs, cinders, Pahoehoe, etc.; also include how far it went and how fast it traveled)
  - ★ Environmental Effects
  - ★ Human Impact
- What makes this volcano interesting or famous?

★ Make sure to find specific events/accounts of the effect that your volcano had on the environment and humans.

On your last slide(s), include a list of the websites or books that you obtained your information from. You should have at least 5 different sources and google and Wikipedia do not count.

If you would like to earn some extra credit during this project, make a poster of your volcano summarizing the information along with your PowerPoint. The poster needs to look good enough to hang out in the hallway. I will provide the paper for your poster if you choose to do this option.
